THE 31ST ANNUAL MEETING OF THE Glomerular Disease Collaborative Network (GDCN)

May 20-21, 2017

The William and Ida Friday Center, Chapel Hill, NC

Sponsored by Carolinas HealthCare System / Charlotte AHEC and the University of North Carolina at Chapel Hill’s Kidney Center and Nephropathology Laboratory

University of North Carolina Kidney Center
CB #7155, 7024 Burnett Womack Building
Chapel Hill, NC 27599-7155
PURPOSE
Glomerular disease is known as an “orphan disease,” a rare disease that affects a small population of patients but has major repercussions. Primary non-inflammatory glomerular diseases cause serious morbidity and mortality and account for 12% of the end-stage renal disease population, costing Medicare more than three billion dollars. This meeting provides an opportunity for nephrologists and renal pathologists to discuss current trends in research/clinical practice.

J. Charles Jennette, MD, Course Co-Director, Brinkhous Distinguished Professor of Medicine, Chair, Department of Pathology & Laboratory Medicine, Executive Director, Division of Nephropathology
Sascha Tuchman, MD, MHS, Director, Multiple Myeloma & Amyloidosis Program, Associate Professor, UNC Division of Hematology & Oncology
